Developing Innovative Alternatives

Meeting your sustainability needs

**Aluminum
Frames**

LED Lights

**High Efficiency
Power Supply
(EA1181/1K)**

Sustainable Values

Our new Lighted Walls solution prioritizes sustainability by using recycled and innovative materials to reduce its environmental footprint. The three key components that contribute to the product's overall benefits include **recyclable aluminum frames, high efficiency power supply, and LED lights**. The signature offerings also come outfitted with **reusable fabric graphics**.

Collaborating for Conservation

In addition to examining our own sustainable practices, we work with our vendor partners to elevate their approaches to product development. A recent success story is the packaging approach for the lighted panels. We are utilizing **Ocean Green Bubble**, which is made of **100% recycled materials**.

It **reduces stretch wrap by 80%** and eliminates the need for corner packaging. We are excited about the possibilities for this packaging method and are actively looking at how we can utilize it for other products.
